

Mohawk Valley Water Authority Capital Improvement Program Large Valve Replacement Program

(All work completed by MVWA Crews)

The 100-year-old 24" Gate Valve on Maynard Drive was leaking and replaced with a new valve. The main in this area operates at 170 + psi. A second 24" valve was installed at the same time by a second crew near Linda Drive. These valves will significantly reduce the area impacted by shutdowns including the pending Linda Drive and Railroad Crossing Main Replacement.

100-Year-Old 24" Cast Iron Pipe.
